SUMMARY

To meet the efficiency standards of Governor Patrick's Executive Order 484, Leahy Center asked ADI Energy to develop a plan to benchmark and reduce its carbon footprint and create a plan of action to reduce it.

**Annual Est. Savings:** \$380,000 over the ten year life

**Size:** 45,236 sq. ft.

SERVICES

- Energy audit development and analysis
- Benchmarking
- Energy savings analysis
- Retro-Commissioning
- Evaluating chiller options
- LCC evaluation of Measures
- Energy modeling
- EMS review
- Recommissioning
- Engineered solutions
- Energy conservation
- Energy reduction
- Energy savings HVAC

MEASURES

- HVAC upgrades
- Lighting
- Rooftop Unit Replacements
- DHW Upgrade
- Energy Management System (EMS)

# Leahy Center Worcester, MA

## UNIQUE VALUE TO CUSTOMER

ADI Energy benchmarked the energy use of the Leahy Center complex and analyzed the buildings' energy data. ADI Energy developed a retro-commissioning program and determined building balance points as well as the need for an EMS to control heating and cooling at the Leahy Center.

ADI Energy completed an on-site system evaluation of the energy systems such as lighting, HVAC, and the building automation system at the Leahy Center. ADI Energy installed trending devices on AHU's and evaluated the heating and cooling condition of the Leahy Center systems. Based on this service, Leahy Center will determine its next option for energy efficiency.
